## **Wildfire managed for multiple objectives on Tusayan Ranger District growing toward the northeast within established planning area**

**Tusayan, Ariz., Aug. 5, 2015—For Immediate Release.**

### **ROCK FIRE OVERVIEW**

A lightning-caused wildfire on the Tusayan Ranger District of the Kaibab National has grown to 650 acres in size. The Rock Fire is located near Rock Lake Pothole just south of the Coconino Rim about 15 miles southeast of the Town of Tusayan. The wildfire, which was started by lightning July 31 and discovered by fire managers Aug. 1, is burning at a low-to-moderate level of intensity through an area dominated by ponderosa pine trees. Fire managers plan to allow the wildfire to take its natural course within predefined boundaries in order to help restore ecological balance across the landscape so that the area is more resilient to threats, such as future high-intensity wildfires.

**Today:** Firefighters will be monitoring the fire as it steadily grows toward the northeast. They are continuing to identify and prepare fire-sensitive resources such as archaeological sites and range fences located within the management area in anticipation of the wildfire's future growth. This important work ensures that as the Rock Fire grows, fire managers will be able to allow it to take its natural course without the risk of negatively impacting other values in the area.

**Smoke:** In the early morning hours, smoke stayed within the general vicinity of the fire. However, as air temperatures heat up, prevailing winds will likely blow the smoke northeast toward the Cameron and Tuba City area. Though the weather forecast is calling for a chance of showers Thursday afternoon, the Rock Fire is expected to burn actively over the next two days and produce smoke that will be visible from Cameron, Tuba City, Valle and Highway 64. Smoke may sink overnight into Tappan Wash and potentially move toward Cameron.

**Closures:** There are no closures associated with the Rock Fire.

**Size:** 650 acres

**Start Date:** July 31, 2015

**Location:** Near Rock Lake Pothole south of the Coconino Rim about 15 miles southeast of Tusayan
