### Burnout In Division J On Skyland Fire

These photos illustrate the Burnout Operations on Division J Wednesday August 15. Burnout is used to secure fireline by consuming fuels directly adjacent to the fireline.

As preparation for burnout, containment line is built and hose lines are laid.

With favorable wind direction, crews lay fire along the containment line using drip torches.

These firefighters are burning off (removing) flashy fuels along the containment area.

Monitoring the progress of the burnout operation.

This firefighter is wetting the area on the opposite side of the containment line.

The containment line is closely monitored as firefighters work to keep the fire within its boundaries.
