## Line Construction Using Fireline Explosive

Fireline Explosive (FLE) is used to expose mineral soil, helping to construct line in some areas.

First, firefighters must clear the way to place the FLE.

These firefighters are laying FLE, a box of it is strapped to a pack on the center Firefighter's back.

This Firefighter is laying FLE.

Click Photo For Enlargement

The two firefighters are joining two lines of FLE.

This photo illustrates how the two lines are joined.

A blasting cap is installed for ignition.

The photo to the left shows a section of line on the Skyland Fire being blasted using FLE. No enlargement of this photo is available.

A video showing FLE being used on the Skyland Fire is available at [www.inciweb.com/877](http://www.inciweb.com/877). Click on the announcements option and look for an announcement titled FLE on Skyland Fire.
