Fire Activity Increasing as Temps Increase

Thursday, July 28, 2016

Fire: Fuller Fire
Acres: 14,385
Cause: Lightning
Total Personnel: 270

Completion: 36%
Start Date: June 29, 2016
Location: Point Imperial, N. Rim Grand Canyon NP
Fuels/Topography: Timber, grass, rugged terrain

The Fuller Fire saw an increase in activity in the interior portions of the fire. Several islands of previously unburned mixed-conifers quickly burned Wednesday afternoon putting a small amount of smoke into the air. As the forecast for the next several days shows an increase in temperatures and a decrease in relative humidity, Fire Managers expect to see more fire activity along the western edge of the Fuller Fire perimeter. In anticipation of the potential for fire spread to the west, crews have been successful in preparing Forest Service Roads 610 and 611 to serve as potential fire breaks for the Fuller Fire. Preparing fuel breaks ahead of the lightning started fire is part of the incident management team's objective of protecting built up areas along Highway 67 from the fire. Fire crews will continue to monitor the fire and take actions as needed to protect public and visitor safety.
