Civilian Injuries: 0	Fatalities: 0	Firefighter Injuries: 24 (minor) Fatalities: 0	
Structures Threatened: 119	Structures Destroyed: 856	Structures Damaged: 71	

CURRENT SITUATION

Current Situation:	<p><u>General Information</u></p> <p>As of Wednesday October 14, 2020, the information trailer is no longer located at Sierra High School. If you have any questions regarding the Creek Fire, please refer to the contact information listed above.</p> <p><u>South Zone:</u></p> <p>The fire continues to burn in fine and heavier fuels that lead into rock outcroppings on the northeast near Cassidy Meadows and south of the San Joaquin River near Junction Bluffs. The weather allowed an opportunity for an aerial ignition operation to help remove some heavier fuels from the fire area yesterday. Smoke will continue to be seen from the area.</p> <p>Suppression lines are currently being repaired. This total reflects 251 miles of Dozer line, of which 46 miles has been repaired and 94 miles of Hand Line Construction, 2 miles has been repaired. Suppression repair work is occurring on approximately 350 miles of line and assessments of impacts are nearly complete.</p>
---------------------------	---

	<p><u>North Zone:</u></p> <p>Engines and crews continue to patrol and monitor containment lines along the western side of the fire from the San Joaquin River north to the Little Shuteye Peak area. Cutting hazard trees and chipping wood debris also continued. Crews continue to monitor the fire line area near Little Shuteye Peak working towards containment objectives. In the areas farther north near Upper Chiquito the patrolling and mop up work also continued. In addition, suppression repair and rehabilitation work has been done on dozer lines. The Roads/Structure Group continues to work on cutting hazard trees along the roads including the 81-road corridor to widen the safety barrier. They are also monitoring the fire conditions near structures to make sure they remain secure.</p> <p><u>Weather:</u></p> <p>Hot and dry weather continues through Saturday with a moderate to strong inversion that was expected to set in late Wednesday evening at approximately 5500-foot elevation. This will confine smoke to drainages and valleys decreasing visibility and air quality. The inversion is expected to persist until approximately 1:00pm today. Critical fire weather conditions will continue, due to minimal humidity recovery and development of warmer than normal temperatures.</p>
