

Waldo Canyon BAER Implementation Aerial Mulching Units (Final)

August 23, 2012
updated M. Moore

0 0.375 0.75 1.5 Miles

Legend

- straw - 1,080 acres
- wood shred - 1,958 acres
- Roadside H Trees
- Timber Stewardship Contract Area
- FS helispots (ag straw)
- Proposed Landings (woodshred)
- Rain Gages (4)
- Special Site

SOIL BURN SEVERITY MAP DISCLAIMER:
The initial basis for this map is satellite imagery from Landsat 5, which has missing data bands through the imagery. The imagery was modified by soil scientists to better reflect soil burn severity (SBS) as observed in the field. The mapping data should not be used for purposes, such as soil application, where the accuracy, particularly where topographic breaks occur in the data, may be critical. For further field verification for small scale analysis purposes, refer to the companion BAER imagery for location of these areas.
