**Utah Fire Info:** <https://utahfireinfo.gov/2021/06/>

**An Area Closure Order is in Place**

**There is NO through access on Mammoth Highway/FH 50**

46% Contained	709 Acres	1 mile South of Mammoth Creek Village	Caused by Lightning
---------------	-----------	---------------------------------------	---------------------

### Yesterday's Operational Shift

- On the south perimeter where the fire burned into a lava flow, crews used water from hose lays to mop-up pockets of heat to further secure the fire line.
- In steeper terrain on the fire's western edge, crews used infrared technology to seek and mop-up remaining hot spots.
- Near structures and interior roads, crews assessed and removed hazardous trees.
- Fire crews built waterbars on fire lines in steeper terrain to prevent soil erosion.
- Where fire line is contained, crews backhauled hose and water handling equipment.

### Today's Operational Expectations

- Crews will continue to backhaul water handling equipment and begin fire suppression repair in areas of the fire where containment has been achieved.
- Firefighters will continue felling of dead or partially dead trees called snags that pose a hazard near structures and along roads.
- Fire resources and equipment will be released from the Mammoth Fire to assist with other emerging large fires in the state of Utah.

### Evacuations, Fire Restrictions & Closures

- Mammoth Creek Village remains evacuated; contact the Garfield County Sheriff's Office for additional information (435) 676-2678.
- [Stage 1 Fire Restrictions](#) are in effect for the Dixie National Forest.
- The Dixie National Forest has implemented a [Closure Area](#) for roads, trails, and lands surrounding the Mammoth Fire. View the [Closure Order Map](#)

### Fire Resources

- 310 personnel, 5 crews, 12 engines, 3 water tenders, 2 helicopters

### Weather

The area is expected to reach record-breaking temperatures by early next week. A Red Flag warning is anticipated for Sunday as hot, extremely dry, and windy weather returns. More than 90% of Utah is experiencing extreme drought, with parts of the state facing dry fuel conditions not seen since the Dust Bowl era of the 1930s.
