

Final Soil Burn Severity Grease Creek Kaniksu Complex 10-15-2015

Burn Severity

- Low/Unburned
- Moderate
- High
- Fire Perimeter
- Open Road
- Closed Road
- Trail
- Forest Service Land

Disclaimer:

The Soil Burn Severity (SBS) map is a product of BAER Rapid Assessment, thus it is not intended to be 100% accurate and the data represented is provisional in nature. BARC imagery was not available for production of the soil burn severity map utilized for all modeling and analyses pursuant to this assessment; it was hand-mapped based upon helicopter reconnaissance and field review by the Kaniksu soils team, and "simplistic" polygons do not reflect the patch size and mosaic nature of the burn at small scale. The primary purpose of this map is for erosion and watershed response modeling NOT for assessing vegetation impacts of the fire. Data users are cautioned to be aware and carefully consider the provisional nature of the information before using it for decisions that concern personal or public safety or the conduct of business that involves substantial monetary or operational consequences. Further information concerning the accuracy and appropriate uses of these data may be obtained from the Forest Service Soil Scientist Andy Casillas.
